- *Waste Disposal*
- *Hydrostatic Test Water Management*
- *Contact Water Treatment*
- *Construction Management Services*
- *Environmental Services Associated with Pipeline Construction Activities*
- *Non-Reportable Spill Management*
- *Contaminated Soil Management*

In addition to our environmental remediation and spill response expertise, Leggette, Brashears & Graham, Inc. (LBG) has provided environmental-related services for terminal and pipeline facility operations for nearly three decades. LBG has the experience to assist you in managing all of your environmental needs, while reporting to pipeline company staff at corporate and/or local levels. Let us do what we do best - solve your environmental problems - so that you can focus on what you do best - facility operations.

Because we have been serving the pipeline industry since 1979, we are experts with managing projects on terminal and pipeline related assets and can work with operations personnel to provide support when needed, with minimal, to no disruption to standard facility operations. LBG personnel are trained to comply with our clients' system integrity plans, and are skilled with communication, scheduling and project management-related tasks. Depending on the situation and comfort level of our clients, LBG has worked independently to manage operational projects, including conducting daily tailgate safety meetings, managing the permitting process, and coordinating specialty subcontractors.

Health and safety is among our key core values at LBG. LBG subscribes to ISNetworld to manage all aspects of our health and safety, and DOT approved drug and alcohol programs.

LBG'S OPERATIONAL SUPPORT SERVICES FOR THE PIPELINE INDUSTRY

Waste Disposal
